物聯網核心網路技術 LAB1

姓名: 陳維倫 學號: N16094409 系所: 機械碩一

目標:應用 App Inventor 2 寫一個猜數字遊戲,使用者輸入 1~100 的數字,系統會根據使用者輸入的數字來縮小可能範圍,若使用者猜中數字後則會跳出 Bingo。按下 Restart 則重新開始遊戲。

結果:

11:16	0	Ŕ	Θ	▼ 🖺 50%
Screen1				_
Enter a number between 1~100				
50				
Guess				
Number between50~100				
About Restart Quit				
11:17	0	Ŕ	. Θ	▼ 🖺 50%
Screen1				
Enter a number between 1~100				
85				
Guess				
Number between75~85				
About Restart Quit				
11:17	0	Ŕ	Θ	▼ 🖺 50%

Enter a number between 1~100				
81				
Guess				
Bingo				
About Restart Quit				

程式碼

```
initialize global (theNum) to 🛴 random integer from (
                                            1 to (
                                                     100
initialize global min to
initialize global max to 100
initialize global (the_counter) to [1]
  when Button1 - .Click
  do
      if 🔯
                 TextBox1 -
                            . Text - = - get global theNum
            set Label2 . Text . to Bingo "
      then
      else if
                 TextBox1 - Text - < get global theNum
            set global min - to TextBox1 - Text -
            set Label2 . Text . to poin
                                                Number between
                                                get global min
                                                " 📨 "
                                                get global max -
            set global max to TextBox1 Text
      else
            set Label2 . Text to poin
                                                Number between
                                                get global min -
                                                get global max
 when Button3 .Click
     set global max - to 100
 do |
      set global min - to 🚺 0
      set global the_counter - to 1
      set global theNum • to random integer from
                                                1 to
                                                        100
      set Label2 . Text . to i ioin
                                          Number between
                                          get global min 🔹
                                          get global max
```

按下的時候,若使用者輸入的數字(TextBox1.Text)等於 theNum 時,即跳出 Bingo,若不等於 theNum 且小於 theNum 則跳出通知 Number between (使用者輸入的數字)~(max),若不等於 theNum 且大於 theNum 則跳出通知 Number between (min)~(使用者輸入的數字),以此類推直到猜中數字為止。若使用者按下 Button3 則重新開始遊戲。
